

Introduction to IoT and Embedded Systems

Module 4 Assignment

Wireshark Packet Analysis Report

1. IP Address of the Computer

*My computer's IP address at the time of the packet capture was:
172.16.90.112*

2. Port Number Used for TCP Connection

*The first TCP packet captured that originated from my machine used the
following port number: 60204*

3. Wireshark Filter Used

*The display filter I used in Wireshark to isolate packets associated with this
port was:*

`tcp.port == 60204`

4. Description

Using Wireshark, I started a packet capture and then visited a webpage. I stopped the capture after the page loaded and identified the first TCP packet from my IP address. I noted the source port and applied a display filter to show only relevant packets. The screenshot submitted shows the IP header and TCP header as required.
